Disability Awareness

Disability symbols were designed for use by both public and private entities to advertise available facilities to patrons both people with disabilities and those with differing abilities. Below are some typical symbols.

Disability Access Sign Symbol Meanings:
1. Universal Information Symbol
2. International Symbol of Accessibility
3. Symbol indicating Audio Description for Theatre & Live Performances
4. Audio Description for TV, Films & Video
5. Large Print / Accessible Print Symbol
6. Symbol indicating Access for Individuals Who Are Blind or Have Low Vision
7. Braille Symbol
8. Telephone Typewriter Symbol
9. Sign Language Interpretation Symbol
10. Assistive Listening Systems Symbol (Ear)
11. Assistive Listening System Symbol (Telephone)
12. Closed Captioning Symbol

Accessibility means more than installing ramps. It means considering inclusive language that is not offensive. “People with disabilities” and “people with differing abilities” are commonly used. Below is a short list of some acceptable and not acceptable words or phrases.

<table>
<thead>
<tr>
<th>ACCEPTABLE</th>
<th>NOT ACCEPTABLE</th>
</tr>
</thead>
<tbody>
<tr>
<td>cerebral palsy/paraplegia/physical disability</td>
<td>crippled, spastic</td>
</tr>
<tr>
<td>cognitive or intellectual impairment</td>
<td>retarded, mongoloid</td>
</tr>
<tr>
<td>communication disorder/unable to speak, deaf</td>
<td>dumb/deaf-mute, hearing-impaired</td>
</tr>
<tr>
<td>disability</td>
<td>Handicap</td>
</tr>
<tr>
<td>psychiatric disability</td>
<td>insane, crazy, deranged</td>
</tr>
<tr>
<td>uses a wheelchair</td>
<td>wheelchair bound/confined to a wheelchair</td>
</tr>
<tr>
<td>has or had a disability</td>
<td>stricken, victim, or suffering from</td>
</tr>
<tr>
<td>accessible parking/seating/restrooms</td>
<td>handicapped parking/seating/restrooms</td>
</tr>
</tbody>
</table>

American Sign Language (ASL) is the preferred language for the Deaf community, those who are Deaf, hard of hearing, and Deafblind. When one sees a capital ‘D’ in the word Deaf, it indicates cultural deafness within what is discussed or stated. Besides indicating hearing loss, the small ‘d’ in deaf indicates someone who is not culturally deaf. Most Deaf people DO NOT read lips. Learning the manual alphabet can help bridge short communication, learning the language will bridge relationships.

Need assistance with how to interact with people with disabilities or those with differing abilities? Below are some tips from The Mobility Resource website.

1. Avoid the "you're so inspirational" remarks.
   We are just trying to live our lives like everyone else. Your comment will have the negative effect, reminding us how different people still think we are.

2. Whatever you do, don’t talk louder.
   The presence of a mobility aid does not mean we’re can’t hear.

3. Ask before helping.
   It may be hard to resist, but automatically helping us without asking first should never be done. We know when to ask for help.

4. Don't lean on our wheelchairs.
   From our perspective, it's one of the most de-humanizing things you can do.

5. Introduce yourself when speaking with the visually impaired.
   I’ve had friends who were blind and one of the most important things you can do when you first meet someone with vision limitations is to introduce yourself.

6. Stay calm - it's only a wheelchair.
   We are just another ho-hum human, but sitting in a chair on wheels. We’re really not as different as you may think. Really.

7. Refer to us as person first.
   Throughout this article, you may have noticed me referring to the disabled population as "people with disabilities." This is called "person first" language and people with disabilities should always be referred to this way in written-form, and in the thought-process as well.

8. Save the patronizing for someone else.
   Avoiding patronizing remarks also ranks high on the list of how-to better interact with people with disabilities. Anything along the lines of "Good for you," "You're so brave," "Wow I’m impressed" should never be uttered. Just remember, again, we are not that different.

9. Talk to us, not whoever is with us.
   More often than not they'll ask whoever they're with - not them - what they're ordering, sadly assuming the person's disability must affect their mental ability too.

10. When in doubt, refer to the "Golden Rule."
    When in doubt over how you should treat us, always refer to the Golden Rule. The Golden Rule is beautifully simple - treat others as you’d like to be treated. Mutual respect.

The opioid overdose epidemic is a problem not only in the U.S., but globally. Sometimes it’s accidental, but can be from abusing illicit substances or prescribed medication. Here are the signs to look for.

**SIGNS OF AN OPIOID OVERDOSE**

- Cannot be woken up or not moving
- Breathing slow or absent
- Choking or coughing, gurgling, or snoring sounds
- Cold or clammy skin
- Dizziness and disorientation
- Discolouration of lips and nails
- Pupils extremely small

**CALL 911 IMMEDIATELY!**

Your address: 

THEN:

- Give breaths 1 breath every 5 seconds
- Use naloxone if you have it

Dementia is not a specific disease. It’s an overall term that describes a wide range of symptoms associated with a decline in memory or other thinking skills severe enough to reduce a person’s ability to perform everyday activities. Below are some common signs and symptoms.

1. Subtle short-term memory loss
2. Difficulty communicating thoughts
3. Rapid agitation and mood swings
4. Disregard for grooming and personal hygiene
5. Difficulty identifying humor
6. Frequent falling and tripping
7. Lapse in judgment
8. Misplacing things
9. Lack of initiative or apathy
10. Getting confused often

Alcohol and drug addiction is a pervasive problem, even a deadly problem throughout the world. If physically addicted to alcohol and benzo’s (e.g. Valium), individuals will need medically monitored detox. Below are some signs to look for.

Commission on Disability Concerns of the Baltimore-Washington Conference
Some disabilities are more obvious than others. Many are immediately apparent, especially if someone relies on a wheelchair or cane. But others — known as “invisible” disabilities — are not.

People who live with them face particular challenges in the workplace and in their communities. Carly Medosch, 33, seems like any other young professional in the Washington, D.C. area — busy, with a light laugh and a quick smile. She doesn’t look sick. But she has suffered from Crohn’s disease, an inflammatory bowel condition, since she was 13. There have been times, she says, when she’s “been laying on the floor in the bathroom, kind of thinking, ‘Am I going to die? Should I jump out in front of traffic so that I can die?’ Because you’re just in so much pain.”

More recently, she was diagnosed with fibromyalgia, a condition that leaves her in a state of full-body chronic pain and intense fatigue. For Medosch and others who struggle with an invisible disability, occasional hospital stays and surgeries are not the hard part. Mundane, everyday activities can be more difficult.

“Washing my hair, blow-drying my hair, putting on makeup—those kind of activities can exhaust me very quickly,” says Medosch. “So you kind of blow-dry your hair and then you sort of sit down for a little bit.”

Walking to the subway or even bending down to pick something up can take a lot out of her. But that isn’t apparent from the outside.

“I kind of call it being able to pass,” she says. “So I can pass as a normal, healthy, average person, which is great and definitely helps ease my everyday life—especially in interactions with strangers, getting your foot in the door in a situation like a job interview.”

It is hard to pinpoint the number of Americans with an invisible disability, but it’s estimated there are millions. Their conditions may range from lupus to bipolar disorder or diabetes. The severity of each person’s condition varies, and the fear of stigma means that people often prefer not to talk about their illnesses.

But in employment disability discrimination cases filed with the Equal Employment Opportunity Commission between 2005 and 2010, the most commonly cited conditions were invisible ones, according to analysis by researchers at Cornell University’s Employment and Disability Institute.

“You know, it’s that invisible nature of an illness that people don’t understand,” says Wayne Connell, the founder of the Invisible Disabilities Association. He started the group after his wife was diagnosed with Lyme disease and multiple sclerosis.

“We’d park in disabled parking, and she didn’t use a wheelchair or a cane, and so people would always give us dirty looks and scream at us,” he recalls.

“When they see someone in a wheelchair, OK, they get that they’re in a wheelchair. But what if they have chronic pain, what if they have PTSD—anything from cancer to peripheral neuropathy to autism?”

Medosch has had similar experiences with invisible disabilities. She says the group’s founder told her that he had been diagnosed with lupus and told her that he had been diagnosed with rheumatoid arthritis.

“When they hear someone in a wheelchair, OK, they get that they’re in a wheelchair. But when they have chronic pain, they don’t always give us that.”

10 Steps for Healthy Aging

Living a healthy lifestyle becomes even more important for better aging. The things we do to keep body and heart healthy—nutritious diet, physical activity, and social connections—also can help promote brain health and wellness. Here are 10 steps for successful aging:

1. Eat Well
Adopt a low-fat diet high on fruits and veggies, like strawberries, blueberries and broccoli. Take daily vitamins. Limit intake of red meats, fried and processed foods, salt and sugar.

2. Stay Active
Brisk walking benefits brain health, while aerobics can boost your heart rate, and weight training builds strength and flexibility.

3. Learn New Things
Pick up a new hobby like playing tennis, learn to speak a foreign language, try a cooking class, or something you haven't done before.

4. Get Enough Sleep
At least 7 to 9 hours is good nights rest. Insomnia or sleep apnea can have serious effects on health.

5. Mind Your Meds
Medications can affect you differently, especially as you age. Talk to your doctor about all medications, whether over-the-counter or prescriptions.

6. Stop Smoking and Limit Alcohol
Smoking can increase the risk of other serious illnesses, while too much alcohol can impair judgment and cause accidents, including falls, broken bones, and car crashes.

7. Stay Connected
Invite friends and family over for a meal, board games, or just to hang out. Maintaining an active social life is important for mental health and keeping a positive attitude.

8. Know Your Blood Pressure
If your blood pressure is high, get it under control under the supervision of a healthcare professional.

9. See Your Doctor
Maintain checkups. Health screenings are key to managing chronic illnesses, such as diabetes.

10. Get a Memory Screening
Our brains need regular checkups, just as other parts of our bodies do. A memory screening is a quick, easy, non-invasive exam for our brains. Talk to your doctor about getting a memory screening as part of your annual wellness exam or call the Alzheimer’s Foundation of America at 866-232-8484.

10 Tips on How to Communicate with those on the Autism Spectrum

Guest Post by Steve Summers*

1. Please always keep in mind that communication difficulties are common with Autism. We have difficulties in reading social cues and body language. Be patient and understanding.

2. We tend to take things literally and have often trouble reading between the lines. As a result, we may ask a lot of questions to clarify what you say. Don't be offended by this. It is our way of being sure that we understand what you are telling us. We may repeat back to you in our own words to try and get on the same page as you.

3. If we misunderstand something you say, please be patient and repeat what you said and explain. Don't assume a negative or hostile intent from us. Keep in mind that communication can be difficult for us. Things that come naturally to you take extra effort by us.

4. Please don't get offended by our communication style. We tend to be frank, honest and matter of fact. Some people may interpret this as blunt or rude. We don't intend to offend you by not sugar coating the things that we say. We don't intend to be rude. Please don't get defensive or assume that we are attacking you. Remember that communicating is hard for us. Don't make negative assumptions. Too often we get corrected or attacked by someone who fails to give us some slack and the benefit of the doubt.

5. Please don't expect eye contact. We may be able to force eye contact, but it is not comfortable for us. Making eye contact takes a conscious effort. This effort may take away from listening and understanding what you are saying. I tend to look at a person's mouth more often than their eyes. Other autistic people will rarely look at your face. Please be patient with us.

6. Please keep in mind that we most likely have been rejected, excluded, ridiculed or bullied in the past. If we seem anxious or insecure this may be due to living in a world that misunderstands us and is often hostile to us. We have to work hard to reach out to others. Please work at reaching back to us with understanding and kindness. If we feel that you are ignoring us we will feel bad about that. We may persist in asking for feedback from you. Please be reassuring and clearly express your support for us.

7. Please don't speak down to us. Treat us as equals. We may sound flat or have an unusual tone to our voice. We may not speak with our voice at all. We may need to type our words. Please be patient with us. It may take us a while to formulate our answers.

8. Please don't get offended by our communication style. We tend to be frank, honest and matter of fact. Some people may interpret this as blunt or rude. We don't intend to offend you by not sugar coating the things that we say. We don't intend to be rude. Please don't get defensive or assume that we are attacking you. Remember that communicating is hard for us. Don't make negative assumptions. Too often we get corrected or attacked by someone who fails to give us some slack and the benefit of the doubt.

9. Please don't touch us without warning. It will make us jump. We don't like unexpected touches.

10. Please don't assume that we lack empathy or emotion. We pick up on negative or judgmental attitudes. We know when people look down on us or are hostile to us. We need to work at understanding and accepting us. Please be patient and understanding.

*Steve Summers

I was diagnosed with Asperger Syndrome (part of the Autism Spectrum) as an adult. I was diagnosed following my 11-year-old son’s diagnosis with Aspergers. I am happy to have my diagnosis. It was like a light being turned on that illuminated my entire life in a new way. Now I understand why I never really ‘fit in.’ It is like having a huge weight lifted off of my shoulders. I want to work together for the better of all on the Autism Spectrum.

I wrote this list due to continuing difficulties that I have had with the give and take of communicating with others. Many people seem too easily offended because they fail to understand these things about me. We all need understanding and acceptance. Music and movies are my outlet for expressing the struggles that I have had to deal with. I don’t feel that people should make divisions between parts of the Autism Spectrum. I’m autistic and I want to work together for the better of all on the Autism Spectrum.
